Power BI Desktop

Sample manual - first two chapters

Manual 1271 - 223 pages -

TABLE OF CONTENTS (1 of 6)

1	POWER BI BASICS	Page
1.1	What is Power BI Desktop?	8
1.2	Installing and Updating Power BI	9
	From Microsoft Store Installing without Automatic Updates	9 9
		_
2	GETTING STARTED	Page
2.1	Getting Started in Power BI Desktop	10
	Example for this Chapter	10
2.2	Working with Files	11
	Creating New Files	11
	Opening and Saving Files	11
2.3	Views in Power BI Desktop	12
	Switching Panes	12
	Report, Table and Model View	13
2.4	Getting Data	14
2.5	Transforming Data	15
	Editing Queries / Transforming Data	15
	The Power BI Query Editor	16
	Replacing Values	10
	Changing Data Types	17
	Removing Columns	17
2.6	Creating Visuals	18
	Inserting a Visual	18
	Assigning Grouping Fields to a Visual	18
	Assigning Numerical Fields	19
2.7	Three Ways to Format Visuals	20
	In Situ Selection	20
	Changing what's on your Chart The Format Pane	20 21
2.0	Dubliching your Depart	21
2.8	Publishing your Report	22

3	IMPORTING DATA	Page
3.1	Our Example	23
3.2	Importing from Different Sources	24
	Re-Using a Data Source	24
3.3	Importing from Excel	25
3.4	Importing CSV or Text Files	26
3.5	Importing from SQL Server	26
	Using Queries and Stored Procedures Passing Arguments to Stored Procedures	28 28
3.6	Importing from a Website	29
3.7	Entering Data Manually	30
	Pasting Data Typing in Data	30 31

4	DATA MODELS	Page
4.1	Data Models	32
	Viewing a Model Selecting Single Model Items Selecting Multiple Items Searching for Fields	32 33 33 33
4.2	Model Diagrams	34
	Arranging Tables in a Model Diagram Layouts Collapsing and Expanding Tables Controlling Expand/Collapse Field Visibility Seeing Table Information	34 34 35 35 35
4.3	Hiding Objects	36
	Why you might Want to Hide Tables and Fields	36
	Hiding Tables Hiding Fields/Columns	37 37
4.4	Model Properties	38
	Table Properties Display Folders Default Number and Date Formatting Changing the Default Aggregation for a Field	38 38 39 39
4.5	Relationships	40
	The Need for Relationships Parent-Child Relationships Creating a Relationship Editing Relationships The Effect of Relationships Cross-Eilter Direction	40 40 41 41 42 42
		74

TABLE OF CONTENTS (2 of 6)

5	VISUALS	Page
5.1	Overview of Visuals	43
5.2	Adding and Changing Visuals	44
	Adding a Visual then Selecting its Data	44
	Data-First Visual Creation	45
	Changing Visual Types	45
5.3	Working with Visuals	46
	The Visual Header	46
	Focus Mode	46
	Spotlight Mode	46
	Resizing a Visual	47
	Selecting Visuals	47
	Moving, Copying and Deleting Visuals	47
	Locking Visuals	48
	Aligning and Distributing Visualisations	48
	Grouping Visualisations	49
	Showing a Visual's Underlying Data	50
5.4	The Selection Pane	51
	Viewing the Selection Pane	51
	Changing the Visual Layer Order	52
	Changing the Tab Order	52

CHAPTER 1 - POWER BI BASICS

1.1 What is Power BI Desktop?

Power BI Desktop is a standalone software application from Microsoft which allows you to load data into a model, and then create pretty reports like this:

◈:

🖪 CentreType 🛛 🗧

CentreTypeld

Collapse

1

CentreTypeNam

🖪 Town 💿 🗄

Colle

You can then publish these reports to the Power BI Service, allowing anyone who has a paid Power BI account to view them:

1.2 Installing and Updating Power BI

There are two ways to install Power BI, depending on whether you want to get automatic monthly updates.

Microsoft Store

From Microsoft Store

The easiest way to install Power BI is from the Microsoft Store:

- a) Type in **Power BI Desktop** in the *Microsoft Store* search bar.
- b) Choose to install the **Power BI Desktop** application (although in this case it's already installed on this user's machine).

Wise

Owl's

Hint

power bi desktop

Every month Power BI will update automatically as Microsoft release new features. The best way to keep track of what these new features entail is to subscribe to the Wise Owl newsletter. This goes out at the start of each month and (among other things) summarises and explains any new updates to Power BI.

Installing without Automatic Updates

If you want to control when monthly Power BI ഹ Ô https://powerbi.microsoft.com/en-us/downloads/ desktop updates are installed on your computer, choose this installation option instead: Microsoft Power BI Overview 🗸 Googling install power bi desktop should lead you to a) this page in your browser. Microsoft Power BI Desktop With the Power BI Desktop you can visually ex data through a free-form drag-and-drop canv range of modern data visualizations, and an ea report authoring experience. Click to download the latest version of Power BI b) Desktop (it'll be up to you to update this manually to Download > incorporate changes). Advanced download options >

CHAPTER 2 - GETTING STARTED

2.1 Getting Started in Power BI Desktop

This chapter describes the basic workflow you'll use to build a report in Power BI Desktop:

Stage	Details
Loading and transforming data	Loading one or more tables from various data sources, cleansing the data and linking the tables together if necessary.
Creating a report	Using the data that you've loaded to create a report, including visuals like charts.
Publishing this	Publishing the results to your report server (usually Microsoft's Power BI Service) so that other people can view your reports.

You'll find much more detail on the ideas mentioned in this chapter in later parts of this courseware.

Example for this Chapter

To demonstrate the basic process of building a report, we'll import a table of data from a webpage and create and publish a report based upon this:

We can use the imported, cleaned data to create a variety of visuals, such as this chart.

Finally we will publish this report to the Power BI Service, so that anyone in your organisation can see it:

Country

Average of Upper Slopes Average of Lower Slopes

Snow conditions ~

The final report published to Power BI Service, and viewed through your browser.

2.2 Working with Files

Creating New Files

You can create a new report in Power BI Desktop in the following ways:

	B 9	6		
	File	Home	Insert	Modelin
	Paste	Copy Format paint lipboard	Get data v	Excel workbook
		. /		
a)	lf you a Deskto	already hav p open, sel	e Power E ect the Fi l	Bl I e menu.

G) Home	~ New
D Open	Report
b) Click on this ico report.	on to create a new

Opening and Saving Files

You can open and save files using options in the File menu:

Every time you open a Power BI Desktop report a new instance of the application will launch, leaving the current report you're working on unaffected. To close a report you must close down the Power BI Desktop application containing it (there is no option to close a report but still leave Power BI Desktop running).

2.3 Views in Power BI Desktop

The most important components of the Power BI Desktop screen are as follows:

Switching Panes

You can use the icons on the right-hand side of your Power BI screen to choose what to show:

Data ···· »	Click on this icon to see the data tables in your model	Format ··· »
→	or this icon to see the format properties of the thing you currently have selected (in this case a chart visual).	Visual Properties ···· +
 ∑ Last showing ∑ Lower Slopes Resort ∑ Upper Slopes 	You can also use these tools on the View tab of the Power BI Desktop ribbon to choose what you want to view.	> Size and style > Title

	Aa Gridlines Page Mobile Gridlines Filters Pane Pane	Selection 🚯 Build a visual

view 🗸 Scale to fit layout

Mobile

Lock objects

Page options

switcher

🛃 Sync slicers

Show panes

Bookmarks

Report, Table and Model View

You can switch between the three views of a report using the tools on the left of the screen:

View	lcon	What it shows	Example view
Report	Report view	The report that you're creating, consisting of visuals and shapes.	Snow forecast 330.0 200 0 Austra Switzerand Country Average of Upper Slopes © Average of Lower Slopes
Table	Table view	The tables of data that you've loaded into your model (you can see one table at a time in this view).	Image: Start of the second
Model	Model view	The links between the tables in your model, called <i>relationships</i> in Power BI Desktop.	Forecast

The 4th icon – if present – allows you to create queries in DAX to interrogate the data upon which your report is based, but this is definitely not something to consider in this courseware chapter!

2.4 Getting Data

The first stage in building a report is to find some data!

2.5 Transforming Data

You'll often need to make changes to the data you have imported so that it can be presented easily in visuals. This process is known as *transforming* data.

Column1 💌	Column2 💌	Column3 💌	Column4 💌	Column5
Resort	Country	Upper Slopes	Lower Slopes	Last Snowfall
St Anton snow reports	Austria	335cm	70cm	12cm
lschgl snow reports	Austria	160cm	80cm	4cm
ObergurgI snow reports	Austria	159cm	85cm	1cm
Lech snow reports	Austria	335cm	70cm	12cm
Saas Fee snow reports	Switzerland	310cm	70cm	1cm
Flims Laax snow reports	Switzerland	350cm	45cm	1cm
Zurs am Arlberg snow reports	Austria	335cm	70cm	12cm
Solden snow reports	Austria	283cm	30cm	1cm
Zell am See snow reports	Austria	148cm	20cm	1cm

We will change the column
headings, turn some
column into numbers and
remove the final column.

	A ^B _C Resort	A ^B _C Country	123 Upper Slopes	¥	123 Lower Slopes	¥
1	St Anton snow reports	Austria		335		70
2	Ischgl snow reports	Austria		160		80
3	Obergurgl snow reports	Austria		159		85
4	Lech snow reports	Austria		335		70
5	Saas Fee snow reports	Switzerland		310		70
6	Flims Laax snow reports	Switzerland		350		45
7	Zurs am Arlberg snow reports	Austria		335		70
8	Solden snow reports	Austria		283		30
9	Zell am See snow reports	Austria		148		20

As with everything else in this chapter, we will go into this topic in much more detail later in this courseware.

Editing Queries / Transforming Data

Each table that you import into a report generates a *query* which tells Power BI Desktop which data to get (and how to get it). You can edit these queries in (at least) 3 different ways:

The Power BI Query Editor

Choosing to edit a query as described above opens the *Power Query Editor* tool within Power BI Desktop.

Although you're still working in the]			conditi	ons						
same Power BI Desktop file, the	,	File	Home	Trar	sform	Add Column	View	Tools	Help		
Power Query Editor has a different		×					-8		🕒 📑 Propert	ies

When you have finished cleaning your	1/				St Anton	snow reports	A	ustria		335cm	
data click Close & Apply to close the	V				Ischgl sno	ow reports	A	ustria		160cm	
Power Query Editor.					Obergurg	I snow reports	A	ustria		159cm	
					Lech snow	w reports	A	ustria		335cm	

This program to edit Power BI queries has gone by many names in the past! This courseware will call it **Query Editor**, although this name seems to have been abandoned by Microsoft. Little known fact: everything that you can do using Query Editor in Power BI Desktop you can also do when getting data in Excel.

Promoting Row Headers

For our example the first thing you need to do is to make the first row your table headers:

Replacing Values

To allow us to average snowfalls for our data we need to remove the **cm** suffices then convert the resulting data to integer numbers:

*	A ⁸ _C Upper Slopes 335cm 160cm 159cm 335cm	▼ A [®] c 1 70cn 80cn 85cn 70cn	Copy Remove Columns Remove Other Columns Add Column From Examples		a)	Select want and s select	t the first column whose cm suffices you to remove, then hold down the <u>Shift</u> key elect the last one (this is the easiest way to t multiple columns in Query Editor).	
	310cm	70cn	Remove Duplicates					
	335cm	70cn 1.2	Replace Values		b)	Right-	click on the selected columns and choose	
	283cm	30cn	Fill	>		to rep		
	140011	2001	Change Type Transform	> >			Replace Values Replace one value with another in the selected columns. Value To Find A ^B C * cm Replace With	
c)	Choose to rep	lace the	text cm with nothing,	then select	OK .		A ^B C -	

Changing Data Types

You can now change the data types of the 3 columns you have selected:

Right-click on the 3 columns and choose to change their data types to **Whole Number** (note that this would have generated errors if we had done this earlier).

▼ ^{AB} C	Upper Slopes	Pa.	Comu	- AB	Last Snowfall
33	5		Сору		
16	0	×	Remove Columns		
15	9		Remove Other Columns		
33	5		Add Column From Examples		
31	0		Remove Duplicates		
35	0		Remove Errors		
33	5	1	Replace Values		
28	3	*2	Fill		
14	8				
			Change Type	►	Decimal Number
			Transform		Fixed decimal number
			Merge Columns	-	Whole Number
				-	Percentage

Removing Columns

Finally, we're not interested in the last snowfall depth, so we'll remove this column.

¥	1 ² 3 Lower Slopes	1 ² 3 Last S	inow	fall	4	
335	70			Сору		
160	80		×	Remove		
159	85			Remove (Other Colum	 Right-click on the Last Snowfall column and rer
335	70			Duplicate	Column	from your query.

2.6 Creating Visuals

Visuals are the tables, charts or other gizmos which display the data in your report. There are many types of visual (you'll learn a lot more about them in later chapters of this courseware).

Inserting a Visual

Probably the easiest way to add a visual to a report is as follows:

Assigning Grouping Fields to a Visual

Once you have inserted a visual you can begin assigning fields to it:

Assigning Numerical Fields

You can assign numerical fields in the same way, then change how you want to aggregate them:

2.7 Three Ways to Format Visuals

Much of your time in Power BI Desktop will probably be spent applying formatting like this:

In Situ Selection

There are a few parts of a chart that you can edit on the chart itself:

Changing what's on your Chart

You can choose to add or remove some parts of your chart using the following icon:

Click on this icon to add or remove certain chart components (here we can add or remove the title, data labels or a slider).

The **More options** button is less useful than you might think: it just takes you to the **Format** pane on the right-hand side of Power BI Desktop.

The Format Pane

You'll spend much of your time in Power BI Desktop using the Format pane:

As a short-cut, double-click on a visual to select any part of it that you want to format; the relevant card will automatically then be selected in the **Format** pane.

2.8 Publishing your Report

When you've finished your report you will probably want to share it!

A (much) later chapter in this courseware will cover publishing in more detail, including an explanation of workspaces (and why you might want to create them), how to create dashboards and much more besides.

What we do!
